Insect and Rodent Control: Keeping Them Out

Can insects and rodents affect your health?

Many types of bugs can live in or around your home. They might be ants, beetles, mosquitos, bed bugs, flies, or cockroaches. Some of these bugs can make you sick. They can bite you or leave germs on the food you eat.

Rodents (mice and rats) can also live in and around your home. You can get very sick from:
- touching rodent droppings (urine and feces)
- eating food or drinks contaminated by rodents
- breathing in dust contaminated by rodents

How can you prevent insects and rodents from living in your home?

Follow these three ideas:

1. Seal up! Look around your home for any small holes or cracks. Bugs and rodents may use these to get inside your home. Seal them up with a mixture of steel wool and caulk. You can find these materials at your local hardware or home repair store. Check for holes in your window screens and sew or tape any holes shut.

2. Clean up! It is important to keep your home clean. A clean home does not attract bugs or rodents. Here are some tips:
   - Keep your food in sealed containers or in the refrigerator.
   - Wash dishes at least once a day.
   - Take out the garbage every day. Keep it in a bin with a closed lid.
   - Keep grilling areas and outdoor picnic tables clean. Make sure there is no standing water in or outside your home. Mosquitos lay their eggs in small, still pools of water.

3. Bait and Trap! You can use traps, bait, or poison to kill insects or rodents to get them out. Traps, baits, and poison are dangerous. Follow these safety tips:
   - Follow all directions that come with the trap, bait, or poison.
   - Make sure that children and pets are not around poison.
   - Always keep poison in the container it came in. Do not reuse the container for anything else.
   - Keep traps, poison, and bait in a locked cabinet where children and pets cannot reach them.

Vocabulary

- Rodents
- Contaminate
- Standing water
- Bait
How can you safely clean up rodent droppings?
You may find droppings from rodents in your home. They may be on your floors, inside cabinets, or on your counters. It is important to clean up droppings in a safe way. Use bleach to kill the germs in rodent droppings. Follow these steps:

1. Put on gloves that are made of rubber, latex, or nylon.
2. Mix 1 part bleach with 10 parts water and put it in a spray bottle. This means that if you use 1 cup of bleach, you must add 10 cups of water to it.
3. Spray the bleach and water mixture onto the urine and droppings and let it soak for 5 minutes.
4. Wipe it up with a paper towel and throw it in the trash outside.
5. Spray the area again with bleach and clean it up with a mop or towel. Wash your hands afterwards!

Vocabulary & Definitions

**Rodent:** Many small animals such as squirrels, chipmunks, and raccoons are in the rodent group. For this lesson “rodent” refers to mice and rats.

**Contaminate:** To make harmful with germs, poisons, or other toxic substances. For example, a fly can carry germs from an animal barn to your food.

**Standing water:** Any amount of water that does not move. It might be water that collects in buckets, old tires, or plant pots.

**Bait:** Something that tricks insects or rodents into eating poison.
### Materials needed
- Dry erase board and dry erase markers
- Pencils

### Handouts
- “Insect and Rodent Control: Keeping Them Out” Lesson
- Skills Practice Worksheet
- “Listening Activity”
- Pre-Post Assessment
- Answer Key

### Estimated time
1 hour

### NOTE TO INSTRUCTOR:
To accommodate the literacy levels and educational experiences of the participants, oral and/or group activities may be substituted for reading, writing, skills practice, and assessments.

  Time: 5 minutes                                                                 | 3. How do you think you can prevent rodents and insects from coming into your house? |
|                |                                                                            | • Distribute Pre-Assessment, and ask them to turn it in when it is complete. |
|                |                                                                            | • Write the vocabulary words on the board, and ask the students to read them aloud. Ask the students if they know what they mean. Provide students with the definitions. Use “Insect and Rodent Control: Keeping Them Out” lesson. |
| Instructions   | • Read the lesson on “Insect and Rodent Control: Keeping them Out”
  Time: 10 minutes                                                                 | • Instructor leads guided reading of topic.                              |
|                | • Identify the vocabulary words in the lesson
  Time: 5 minutes                                                                 | • Students identify the vocabulary words by circling them in the lesson. |
|                | • Distribute and review the Skills Practice Worksheet with the students and ask them to complete it. Use the Answer Key sheet to verify the correct answers.
  Time: 25 minutes                                                                 | • Activity 1: Students have 10 minutes to complete this activity.          |
|                |                                                                            | • Activity 2: Students have 10 minutes to complete this activity.        |
|                |                                                                            | • Activity 3: Students have 5 minutes to complete this activity.        |
| Concept Check  | • Conduct Post-Assessment
  Time: 5 minutes                                                                 | • Students complete Post-Assessment.                                   |
Activity 1: Cleaning Up
Put the steps for cleaning up rodent droppings in the right order. Number the statements from 1 to 5.

1. Spray the bleach and water mix onto the urine and droppings and let it soak for 5 minutes.
2. Put on gloves made of rubber, latex, or nylon.
3. Spray the area with bleach again and clean it up with a mop or towel. Wash your hands after!
4. Wipe it up with a paper towel and throw it in the trash outside.
5. Mix 1 part bleach with 10 parts water and put it in a spray bottle.

Activity 2: Protecting My Home from Insects and Rodents
Check all the boxes next to what you should do to keep away insects and rodents.

☐ Keep your food in sealed containers or in the refrigerator.
☐ Seal up holes and cracks inside your home.
☐ Hang up pictures of big cats to scare away mice and rats.
☐ Take the trash out every day.
☐ Leave small pools of water around your yard for thirsty animals.

Activity 3: Listening
Listen to your teacher’s instructions carefully and mark the correct answer.

Listening Activity

Purpose: To practice listening comprehension
Time: 5 minutes

1. Tell your students that in this activity they will practice their listening comprehension skills.
2. State that you are going to read five different sentences twice.
3. Let them know that after you finish reading the sentence for the second time, they need to fill in the blank.
4. At the end, check the students’ answers to make sure they are correct. If some students do not have the right answer, invite other students to participate in the discussion until the information is clear.

True or False?

1. Can insects and rodents make you sick?
   Yes   No

2. Which of the following is a good way to keep insects and rodents out of your home?
   a. wash dishes everyday
   b. seal up holes and cracks
   c. get rid of standing water
   d. all of the above

3. What should you use to clean up rodent droppings?
   soap and water   bleach

4. *Contaminated* food is filled with germs, poisons, or other toxic substances.
   True   False

5. Are the traps, bait and poison used to kill insects and rodents dangerous to humans?
   Yes   No

Total Correct:_______
