A message to instructors ...

Mental health is a deeply personal issue that is usually difficult to discuss. Whether concerns revolve around an individual’s own mental health concerns or those of others, mental health affects entire families, colleagues, close friends and communities. Because of stigma, discrimination and fear, mental health concerns often create family secrets, e.g. something that is never discussed. Added to this dilemma is the fact that a symptom of mental illness is that people often do not recognize when their own thoughts/feelings are not normal. They may not feel sick and most of the time, people don’t have sufficient objectivity to see what others may be observing. This is one of the complexities of addressing topics and concerns surrounding mental health.

While it is a difficult challenge, please know that it’s usually a relief when people have opportunities to hear about and talk about such an important issue.

As this curriculum is taught, don’t be afraid to ask students how they’re doing or how they’re feeling. When this is done, be prepared to truly listen for the answers, even if conversations are difficult or uncomfortable. Mental health is a hard subject to teach and to truly understand. While you may not fully understand issues that arise, your most critical teaching role may be to facilitate knowledge and understanding and help people find resources. In discussing these issues, emotions - including your own - may run high. All endeavors to positively address the realities of mental illnesses and mental health challenges are needed. You’re embarking on a challenging – but worthwhile - journey to create a healthier, happier environment for those you serve.

Thank you!
**Addiction / Co-occurring disorders:** addiction problems pose mental health challenges, and mental health challenges often pose addiction problems. However, not all people with addictive disorders have mental illnesses, and vice versa. Addictions often have a strong base in genetics or inherited family genes and physical health. Addiction is not normally considered a mental illness or mental health challenge unless it occurs in conjunction with a mental illness. The facts are:

- 50% of people with an addictive disorder also have a mental illness or anxiety disorder.
- 20% of people with mental illnesses have some sort of addiction.
- There is a strong correlation between mental health and substance use, as alcohol or other substances are often used to medicate (or self-medicate) mental health symptoms.
- Addiction is not a mental health diagnosis, but addictions certainly impact and complicate how the brain - and therefore behaviors - are impacted.
- Addictions, however, may become so serious that they can lead to mental illnesses. Addiction is a vital topic to cover, check statements in the pre- and post- tests to ensure wording that’s accurate and comfortable within the context of the curriculum.

You might want to introduce the topic of genetics in this section. It’s sometimes hard to be self-aware of personal behaviors, but they may recognize those of family members or friends. Science continues to evolve, but there seem to be linkages to genetics in many mental health diagnoses as well as addiction problems. Genetics are not at the point of predicting who will develop illnesses, but it is at a point of recognizing vulnerabilities that make some people more likely to become ill.

# Lesson Plan

**Materials needed**
- Dry erase board and markers
- Pencils

**Handouts**
- “Let’s Talk About Alcohol” lesson
- “Listening Activity” handout
- Skills Practice Worksheet
- Pre-Assessment
- Post-Assessment

**Estimated time**
- 1 hour

**NOTE TO INSTRUCTOR:** To accommodate the literacy levels and educational experiences of the participants, oral and/or group activities may be substituted for reading, writing, skills practice, and survey activities.

Let’s Talk About Alcohol
Pre-Assessment

Date: ____________________________
Name: ____________________________

Circle the correct answer.

1. One drink is equal to:
   a. 12 ounces of beer
   b. 5 ounces of wine
   c. 1.5 ounces of tequila
   d. All of the above

2. Drinking in moderation is equal to drinking two drinks a day for men.
   True      False

3. If you regularly drink too much alcohol you may:
   a. Have problems in your relationship with family members and friends
   b. Not work or study as well as before
   c. Develop health problems such as heart disease and liver disease
   d. All of the above

4. Not having alcohol in your home can help you drink less or quit drinking.
   True      False

5. You may have a drinking problem if you drink when driving or using machines.
   True      False

Total Correct:_______

Let's Talk About Alcohol

Every night after work, Mateo and his friends have drinks together. Sometimes his friends want him to drink more than he would like to drink. Mateo drinks because he wants to fit in. He knows that drinking a lot is causing problems at work. He is not able to work as hard as he used to. He is worried that he might lose his job. Mateo wants to drink less but he is not sure how.

What is ONE drink?
Think about a can of beer and a shot of tequila. These drinks are different sizes. You may think that you are drinking more alcohol when you have a beer than when you have a shot of tequila. Both of them have the same amount of alcohol. They both count as one drink. Each drawing below is ONE drink.

1 beer
12 ounces

1 glass of wine
5 ounces

1 shot of whiskey, rum, or tequila
1.5 ounces

How do I know if I am drinking too much?
It is important to recognize if you are drinking too much alcohol to avoid any problems it can cause. Here is a table that shows what “drinking too much” is.

This is what “drinking too much” in ONE occasion is:  

For men, 5 or more drinks within 2-3 hours

For women, 4 or more drinks within 2-3 hours

This is what “drinking too much” in ONE Week is:

For men, 15 or more drinks per week

For women, 8 or more drinks per week

How can drinking too much affect you?
Alcohol abuse is when drinking too much alcohol becomes a habit. It can cause:

• Problems at home, work, or school
• Health Issues: liver disease, heart disease, depression, stroke, cancer and birth defects
• Injury: car accident, drowning, burns and falls

Drinking in moderation reduces the health problems alcohol may cause

WOMEN
Up to 1 drink per day

MEN
Up to 2 drinks per day
You should NOT drink alcohol...

If you are a pregnant woman

If you are under 21 years of age

If you plan to drive or operate machinery

If you take medication or have a condition aggravated by alcohol

How do I know if I have a drinking problem?
You may have a drinking problem if you:
• drink more or longer than you want
• try to cut down or stop drinking but you cannot
• keep drinking even if it causes problems at work, school or at home
• drink when driving or using machines
• drink even if you have health, family, or legal problems
• have trouble sleeping, nausea, or sweat when the alcohol wears off

* If you have any of these symptoms, see your doctor right away, drink less or stop drinking.

What can I do to drink less?
• Make a plan. Decide how many drinks you will have ahead of time.
• Do not drink every day. Decide which days you will drink (for example- only on weekends).
• Ask others to help you. Your family, friends or coworkers can give you support.
• Don’t keep alcohol around the house. Spend time in places where there is no alcohol.
• Do other activities in your free time that you enjoy instead of drinking.
• Learn to say NO when you do not want to drink.

Vocabulary & Definitions

**Alcohol**
In beer, wine, and liquor. When you drink too much it changes how you think and act.

**Alcohol abuse**
When a person regularly drinks too much and continues to drink even if it causes problems. A person may lose their job. Some go to jail because they drive drunk.

**Drinking in moderation**
Refers to the limited amount of alcohol a person can have to reduce the health and safety problems that alcohol can cause.
Let's Talk About Alcohol
Listening Activity

**Listening Activity**

**Purpose:**
To practice listening comprehension

**Time:**
5 minutes

1. Tell your students that in this activity they will practice their listening comprehension skills.
2. State that you are going to read five different sentences twice.
3. Let them know that after you finish reading the sentence for the second time, they will need to fill in the blank.
4. At the end, check the students’ answers to make sure they are correct. If some students do not have the right answer, invite other students to participate in the discussion until the information is clear.

---

**Listen and Fill in the Blank**

Let’s Talk About Alcohol
Skills Practice Worksheet

Activity 1: How many drinks?

After work on a Friday night, Patricia and her friends bought some beer. Patricia drank one 12 ounce bottle of beer while she was cooking. At dinner, she drank one more beer. After dinner, some other friends arrived. They brought a bottle of tequila. Patricia had 1 shot and another beer.

1. How many drinks did Patricia have?_____
2. Does the alcohol in one shot of tequila equal one bottle of beer? _____
3. Did Patricia drink in moderation? _____

Activity 2: Fill in the blank.

1. A woman drinks in moderation when she has _______ drink (s) in a day.
2. A man drinks in moderation when he has _______ drink (s) in a day.
3. If a woman drinks more than _______ drinks in a week, she is drinking too much.

Activity 3: Listen and fill in the blanks.

Listen carefully to your teacher’s instructions.
